SAFETY:

READ and UNDERSTAND the Material Safety Data Sheet (MSDS) before using this product. **WARNING:** Wear protective clothing and equipment. See HMIS block. For emergency information, call CHEMTREC at 800-424-9300 or 703-527-3887 (outside USA). **KEEP OUT OF REACH OF CHILDREN.**

PREPARATION:

Clean all dirt and loose materials from cracks. Dampen the crack, but do not leave any standing water. Deep cracks should be filled with sand or backer rod to within 1/2" of the surface.

PLACEMENT:

Shake container well. Cut the tip to the desired opening size. Squeeze material into the cracks. Do not fill cracks that are deeper than 1/2" (12 mm) in one application. If more than one layer is required, wait 5 days between applications.

CURING:

Full cure can take up to 5 days depending on weather conditions. Keep traffic off the area during this time. If it is necessary to open area to traffic before SAKRETE® Crack Filler is fully cured, sprinkling sand on the patch will help prevent tracking. If driveway sealer is to be applied, wait 5 days after applying crack filler before applying driveway sealer.

KEEP FROM FREEZING.
